Technical Profile

Software Engineer since 2009 with extensive expertise across full-stack development, scalable systems architecture, systems administration, and DevOps. Proven track record of delivering diverse solutions, including web and mobile applications, multi-platform software, cross-platform video games, and SaaS products. Driven by core engineering principles, including SOLID, DRY, clean code architecture, and automated CI/CD pipelines, my competencies centre on pragmatic system design, rigorous lifecycle management, and the robust, secure deployment of critical software components.

Engineering Stack

• Programming Languages

Core Stack: C++, Python, TS, JS

Proficient: Rust, Java, Kotlin, Solidity

• Frameworks & Libraries

Next.js, React, Vue.js, Node.js,

Spring Boot, Nuxt.js, Foundry, OpenZeppelin

• Cloud, Infrastructure & DevOps

AWS, Docker, Kubernetes, NGINX, CI/CD (GitHub

Actions), Vercel, Firebase

• Architecture & Protocols

RESTful APIs, WebSockets, Serverless, Microservices, Git, Bash/PowerShell

• Game & Mobile Development

Unreal Engine (C++/Blueprints), OpenGL, DirectX, Android SDK, Wear OS, Steamworks

• Databases & Storage

PostgreSQL, Redis, MSSQL, MongoDB,

Supabase, Neon

Professional Experiences

• Software Engineer & Game Developer 2009 ~ Present

LuckyGene Indie Studio (Founder) | Self-employed Full-time

- Founded in 2019, with operations starting in 2009 after signing my first commercial contract. Collaborated with 500+ unique clients to date, and partnered with 50+ different teams on a contract basis as a Software Engineer, Backend, or Full-Stack Developer.
